EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
2. The application has been amended as follows:
 - A) Please rewrite claim 4 as follows:
 4. (Currently Amended) A metallic conductor according to Claim [3]1, wherein the polygonal cross-section is a circular sector.

Allowable Subject Matter

3. Claims 1, 4, 7-8, and 11-23 are allowed.
4. The following is an examiner's statement of reasons for allowance: This invention deals with a metallic conductor for a low-tension electrical conductor, the metallic conductor comprising an assembly of flexible wires each having a diameter of less than or equal to 0.61 mm; wherein the conductor is arranged in a predetermined polygonal cross-section comprising one curved side and two straight sides, wherein the conductor is surrounded by a layer of an insulating material that holds the wires in the predetermined polygonal cross-section such that, and wherein the conductor is shape-maintaining whereby it maintains the predetermined polygonal cross-section unless and until the layer of insulating material is removed (claim 1). This invention also deals with a method of manufacturing a metallic conductor comprising the steps of: providing an

assembly of flexible wires each having a diameter of less than or equal to 0.61mm; deforming, using a mechanical means of deformation, the assembly of flexible wires and arranging the wires to form a metallic conductor having a predetermined polygonal cross-section comprising one curved side and two straight sides, extruding, using an extrusion means, the metallic conductor obtained in the preceding operation; and surrounding the extruded metallic conductor in a layer of insulating material that holds the wires in the predetermined polygonal cross-section such that the conductor is shape-maintaining whereby such that it maintains the predetermined polygonal cross-section unless and until the layer of insulating material is removed (claim 19). This invention also deals with a flexible electric and/or communication cable consisting of: a plurality of metallic conductors; each of the conductors comprising a plurality of wires having a diameter of less than or equal to 0.61mm and an insulating layer enveloping the wires; wherein the wires and the insulating layer are constructed and arranged to form a conductor that has predetermined polygonal cross-section having a curved side and that maintains the predetermined polygonal cross-section unless and until the insulating layer is removed; and a flexible protective sheath covering the plurality of metallic conductors (claim 23). The above stated claim limitations are not taught or suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

5. Applicant's arguments filed August 6, 2009 have been fully considered and they are persuasive. Specifically, the applicant's argument that "Neither Chase, Rost, nor AOAPA teaches or suggests the conductor maintaining its section whereby the conductor is shape-maintaining such that it maintains the predetermined polygonal cross-section unless and until the layer of insulating material is removed." is persuasive and therefore the claims have been allowed.
